

RESCUERUNNER™

SAVES LIVES AT SEA

”The Swedish Sea Rescue Society had created the optimal rescue vessel. RescueRunner was a chance for me to give something back to my colleagues who lost their lives.”

Lars Bertil Rystrand navigator at Swedish Armed Forces Helicopter Wing

A MISSION COMING STRAIGHT FROM THE HEART

The aim of the RescueRunner™ is to save lives by getting people out of the water in the shortest possible time. The RescueRunner™ has the ability to do this whether they are conscious or unconscious.

The RescueRunner™ was developed by the Swedish Sea Rescue Society and designed by Fredrik Falkman.

After the tragic event of the Helicopter H99 in November 2003, Flight Lieutenant Lars-Bertil Rystrand started a fund to finance the construction of RescueRunners in memory of the victims.

FUNCTION AND FLEXIBILITY IN PERFECT HARMONY

The RescueRunner™ is based on techniques used worldwide in beach and surf rescue with a Personal Water Craft, fitted with a rescue sled. But RescueRunner™ takes this one step further by combining them into one boat - while adding purposeful design and the ruggedness needed to operate in the roughest environments.

2006
RescueRunner™
won the Swedish
Design Awards

Special features

- Low aft deck for fast and simple rescues
- Extremely rugged with drive train in a GRP cartridge and an exchangeable protective PE hull
- Inspection hatch to quickly clear the water jet
- Can be fitted with underwater search lights, handlebar heating, AIS transponder, etc.

Design Fredrik Falkman

Developed by the SSRS, Swedish Sea Rescue Society

Engine Yamaha four stroke, 140hp drive train

LOA 3.6 m; **Beam** 1.5 m; **Draught** 0.3 m

Dry weight 350 kg; **Load capacity** > 400 kg

Top speed up to 40 knots; **Fuel capacity** 70 l; **Range** > 70 NM

”Even greater advantages become apparent when we are dealing with heavy seas and narrow passages. These are situations where stability and manoeuverability make the RescueRunner superior in terms of safety.”

Anders Bagge *first cox, rescue vessel*

THE WORLD'S MOST EFFICIENT LIGHT SEARCH AND RESCUE SYSTEM

RescueRunner™ give you completely new and previously unavailable options for saving life at sea. The function, flexibility and minimum time expenditure are unrivalled on the market.

Areas of use and scenarios

- Getting people who are in distress – conscious or unconscious – out of the water in an extremely short period of time
- Rescuing and assisting in white water zones, in shallow areas, among rocks, reefs and cliffs – to go where a larger rescue boat would have been in danger
- Boarding small and large boats for assistance or transferring people in all conditions
- Launching from helicopters to efficiently gather up people in water onto life rafts
- Trailing and launching from beaches and in lakes
- Beaching for quick hand over of injured people to land-based medical response units
- Reaching boats or people in wake sensitive or congested areas quickly
- Shipping by air to rescue and relief work in flooded or other disaster areas

”We wanted to create a rescue boat so small and durable that it could go where other boats can't go to provide help and to save lives.”

Fredrik Falkman *designer of the RescueRunner™*
